DETAILED ACTION

Claim Objections

Claim 5 is objected to because of the following informalities: in line 7, --predetermined—is misspelled. Appropriate correction is required.

Allowable Subject Matter

Claim 5 is allowed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (APA) in view of Turner. APA is the apparatus listed before 'the improvement comprising' clauses of claims 1 and 3. This includes the use of a fluid coupling having an impeller and a runner in combination with a comminuting machine. Apparently there is no speed sensor in APA to help control the apparatus function. Turner solves this problem by disclosing similar apparatus including the use of a speed sensor to control the material feed. In order to provide for the control of material feed, it would have been obvious for one of ordinary skill in the art to modify APA by providing a speed sensor wherever desired, taught to be desirable by Turner.
